## CORRECTION FACTORS

Steel FE 360	1	Copper	0.34	Aluminum	0.4	Brass	0.5	Stainless S. V2A 1 / 2 mm	0.76
--------------	---	--------	------	----------	-----	-------	-----	---------------------------	------

Note: the operating distance of the sensor must be multiplied by the correction factor of the material. For example, the operating distance on Aluminum is  $S_{n,Al} = S_n \times CF_{Al}$ . In case of embeddable mounting, the distance is multiplied by the additional correction factor of the support, thus  $S_{n,Al} = S_n \times CF_{Al} \times CF_{emb,Al}$ .
